CALL FOR PAPERS

CIST'2012 is part of the IEEE CONFERENCE SERIES that are held in Morocco, and is co-sponsored by the IEEE Morocco Section and the IEEE Morocco Computer & Communication Joint Chapter. The 2012 edition will be held in Fez, Morocco from the 24th to the 26th of October 2012.

The IEEE Colloquium in Information Science and Technology is emerging as a key annual event that aims to serve as a forum to promote the exchange of the latest advances achieved by IT researchers, IT decision makers, IT managers, application designers and software engineers in the domain of computer based information and communication sciences. Computing challenges, conceptual models, implementation techniques and tools, applications architectures, and IT solutions will be discussed from the perspectives of academia, businesses, industry and government. The 2012 edition will also include tutorials and keynote sessions from world known experts.

Extended abstracts submissions

Prospective authors should submit by using the online abstract submission form, available at CIST'12 website http://www.ieee.ma/cist/, a paper of 4 pages minimum describing their original work. Please also use the template available at the website.

Publications

Accepted papers will be published in the proceeding in the IEEE Xplore Library. Furthermore, Authors of high quality papers will be invited to submit an extended version of their work for potential publication in a special issue/section of an international journal.

Accepted papers must be registered; otherwise they will not be included in the IEEE Xplore Library.

Deadlines

- Paper Submission: April 15, 2012
- Acceptance Notification: June 11, 2012
- Camera-ready Submission: July 3, 2012
- Author Registration: August 6, 2012
- Conference Dates: October 24-26, 2012

The first author is limited to submit a maximum of 2 papers and at least one of the co-authors of every paper should register.

Topics

We solicit submission of original ideas and papers describing significant results and developments from both researchers and practitioners in a specific range of fields addressing the following topics:

1. Requirement Engineering and Information Modeling Concepts
2. Enterprise Architecture, Business Process Modeling
3. Databases, Datawarehousing, Knowledge management and Business Intelligence
4. Ambient Intelligence, Cloud computing, SOA, distributed architectures and applications
5. Social Context and Learning Environments
6. Systems and methodologies for Learning / Teaching and Assessment
7. Web Information Systems and Ontologies
8. Information System Engineering and Cross-Disciplinary Applications
